

NEWS RELEASE

25 July 2022

Luminous Energy is expanding the team to help deliver solar and energy storage projects across the UK and in key global markets.

- **Technical Manager:** to provide technical oversight of our international project portfolio of ground mount solar farms and battery energy storage systems as well as analysis of new project opportunities.
- **Commercial Manager:** to provide commercial oversight of our international project portfolio of ground mount solar farms and battery energy storage systems as well as analysis of new project opportunities
- **Financial Controller:** to provide financial control of the Luminous group including its international subsidiaries and project companies
- **Business Development Associate:** a highly motivated individual to support its business development activities by identifying potential sites for projects and liaising landowners to secure new opportunities.

All roles are a mix of remote working and coming into our office at Corsham, Wiltshire.

If you'd like more details about any of the roles, then please get in contact. In the first instance to Caroline Watson, Office Manager, caroline.watson@luminous.energy

About Luminous Energy

Luminous Energy is UK-based developer of international solar and storage projects with exciting global ambitions. Established in 2013, the renewable energy company aims to deliver a meaningful impact on the environment and society and give more people access to clean and affordable electricity.

The company's international experience enables it to pick the best sites for its large-scale solar and storage projects. It commits huge effort to delivering tailored high-quality projects with its partners, demonstrated through its 100% success rate in planning applications worldwide.

Globally, Luminous Energy has a portfolio of solar and storage projects, delivered and in its pipeline across the UK, USA, Australia and Chile.
