Luminous Energy appoints Ali Akbar Ajmerwala as Technical Manager

As part of its new build, own and operate strategy, Luminous Energy is very happy to announce the appointment of Ali Akbar Ajmerwala as Technical Manager.

As Luminous Energy prepares to mark its 10th anniversary and as part of its revised business strategy, the focus of the business has shifted from developer to owner operator of renewable energy projects.

This appointment is an integral part of delivering that strategy. The first project in line for construction is the 27MW Bracon Ash solar farm with a further four projects following close behind.

Ali has been developing commercial and industrial renewable energy projects in Bahrain and Saudi Arabia, and leading end to end solar system designs in the MENA region. His experience in electrical, structural, and civil design for both solar and battery storage fills a critical role in the Luminous team.

It's also the first time that Luminous Energy has recruited from overseas and the company is now a licenced sponsor. 'This is a significant step for Luminous Energy – our projects will benefit from Ali's wealth of experience, and he will play a key role in delivering our new business plan', says Jolyon Orchard, Chief Executive Officer.
